[Server Features]

- The image server is easy to set up and can manage up to 128 CCTVs.
- It can be set up in any unit and can be operated on the cloud, greatly increasing data security and autonomy.
- Easy to integrate data mapping software or GIS system.
- The home page of the server can be on Google Map, and it can locate multi-point real-time images, and you can see the whole picture on one page. It is a sharp tool for your long-distance and large-scale environmental monitoring.
- The image display screen has a variety of grid options, and has the functions of clicking to zoom in, querying historical images at a specified time, fast forwarding, pausing, playing, and downloading.
- Built-in independent Http server, no need to set up servers such as PHP / ASP / Apache / IIS, avoiding network attacks, and a cover for information security.

[Specifications]

Host Recommended Specifications (※The host needs to prepare by itself)	
CPU	i7-12700 above
Memory	16G(CCTV*64)，32G(CCTV*128)
Hard drive	4T*4 array
Graphics card	NVIDIA RTX3060 above
System	Windows 11
Screen	≧ 24 Inches
Camera Optional	
1. IoT Environment Camera (IEC)	
2. Zoom IoT Environment Camera (ZIEC)	
3. IoT Underwater Camera (IWC)
